Ventilated Inner Cover

Information

Our Ventilated Inner Cover allows you to move a colony without fear of suffocating your bees. It also provides better ventilation during the year reducing the bees from clustering at the entrance. The end bars on the screen are raised 3/8" so when the top is in place there is a better air flow. Those of you who want better ventilation will enjoy this product.

Instructions

Item is pre-assembled and ready for use. Designed for 8-frame or 10-frame, the Ventilated Inner Cover slides into place on top of your hive with the raised ends pointing up. It sits flat allowing for 1-1/2 square feet of ventilation for your bees. When placing the top on the hive over the ventilated inner cover, it will rest on the end pieces leaving both sides open for airflow.

ADDITIONAL: During winter months it allows for ventilation and keeps moisture from collecting in your hive.

REMEMBER: Any wooden ware should be treated for outside use. Latex paint or outdoor finish is appropriate on outside (Bees take care of inside).

Other Items to Consider

Must be Ordered Separately.

Item #935 Hive Carrier

Item #667 10-Frame Telescoping Top
