## Cardboard Nuc Assembly Instructions

### 1) Waxed Cardboard Nuc Components

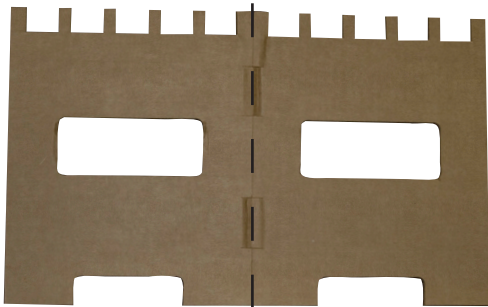

### 2) Folding the Cover

The dotted lines indicate the location of pre-scored folding guides. First fold along Line A and fold the flap (1) along Line D. Next, fold the center portion of the cover along Lines B, C, and D so that the areas circled interlock. It should look like the photo to the right

### 3) Frame rests

Fold the frame rest in half along the dotted line.

### 5) The finished nuc

This wax coated nuc is the best on the market and is time tested. The inner cover folds over the top of the nuc to seal the top. The vents on each end provide much needed ventilation and the screens confine the bees. However, despite the superior design and features of this nuc, care and caution should be taken when bees are enclosed and transported. Always, inspect the nuc to ensure everything is sealed tightly.

### 4) Assembling the nuc

The pieces of screen are placed between the nuc box and the frame rest. The screen can be slid up and down to open or close the entrance. Since there is nothing to hold the bottom flaps closed, always lift from the bottom.
